

(11).To compare AI-generated content with student-created content and understand limitations of AI. a) Write a 100–150 word paragraph on the topic: “Will AI replace jobs or change them?” (This must be written by the student.) b) Ask any AI tool (ChatGPT/Gemini/Copilot) to write the same topic. c) In your practical copy, create a Comparison Table with the headings: I. Human-Generated Content II. AI-Generated Content

AI is less likely to replace jobs entirely than to significantly change them. While automation will eliminate certain routine tasks, it will also create new roles focused on managing, guiding, and refining AI systems [3]. The future workforce will require adaptability, with an increased emphasis on critical thinking, ethical judgment, and creative problem-solving—skills where humans currently excel [3]. The integration of AI technology is more about collaboration than substitution, transforming traditional roles and demanding new skill sets rather than mass unemployment [3]. Therefore, the narrative shifts from replacement to transformation, where human ingenuity and AI efficiency converge to redefine the nature of work.

I. Human-Generated Content

- * **Creativity and Originality:** Often features novel ideas, deep emotional context, and unique perspectives.
- * **Nuance and Empathy:** Capable of understanding and conveying complex human emotions, cultural nuances, and subjective experiences [2].
- * **Ethical Judgment:** Involves human responsibility, accountability, and a capacity for ethical reasoning and bias mitigation.

II. AI-Generated Content

- * **Efficiency and Speed:** Can produce large volumes of content rapidly based on existing data patterns [1].
- * **Data-Driven:** Content is generated by algorithms, potentially lacking genuine emotional depth or personal insight [2].
- * **Bias Potential:** May replicate or amplify biases present in its training data without human oversight [2].
